

# An example of adoption of our new product was introduced in Japan Metal Bulletin.

March 30, 2022

An example of adoption of a new product of stainless steel design steel plate developed by our company was introduced in Japan Metal Bulletin (published on 3/30).

Our main product NEUES new color “Moss Green” was adopted for the first time at the salad specialty store “Crisp Salad Works Roppongi Hills Store”. The bright green color of moss green matches the concept of Crisp Salad Works, so it is used for table counters, cupboards and storage doors. The design company, Special Normal creates an elegant yet eye-catching space by contrasting the stainless steel plate of NEUES Moss Green with the pale green of the store interior.

The black stainless steel “NINJA BLACK96” released in 2020 has expanded its use, starting with the adoption at the entrances of elevators and condominiums. Due to the increase in demand, Tanico Kitchen started in-house inventory of NINJA BLACK 96. We developed this color only on Hairline finish at the beginning, now we have added a new variation of Vibration finish to our product lineup meet the needs of the customers. We will increase the variation of NINJA BLACK96 in order to establish it as a standard product in the future.
